

ABET ICT Lesson Material

CURRICULUM INTEGRATED

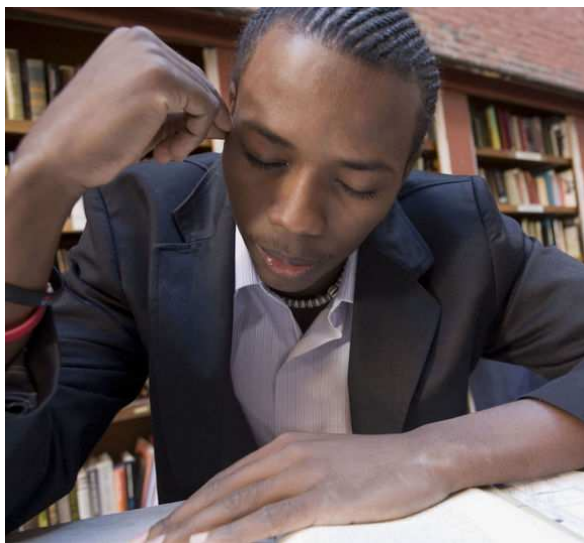

ICT Lesson Content is integrated with the ABET National Curriculum. Computer lessons cover the outcomes from other learning areas.

LESSON MATERIAL

The ABET ICT Lesson Material is NOT software neither computer based training. It is lesson material in which the computer is used as tool to complete real-life assignments.

ORDINARY SOFTWARE

Lessons can be done on any computer with ordinary office software. Module 2 – 3 work with all operating systems.

- Module 1: Basic Computer Skills – suitable for illiterate adults
- Module 2: Introduction to Computer Skills – suitable for beginner adult learners
- Module 3: Intermediate Skills for ABET learners – adults who mastered basic reading and writing

PresentIT supplies quality ICT (Information and Communication Technology) lesson material to educational institutions. We strive to provide “real-life” training, which means that the computer class must simulate the working environment and activities and projects must be applicable to the working place outside the classroom.

We want to enable all learners in South Africa to cross the digital divide and we want to make ICT training available and applicable to all situations. This includes illiterate ground level workers and educated ABET level 4 learners.

With the training material we give the facilitator material in his/her hand in order to have confidence to present the ICT training. Although we provide the complete system, including classroom support material, we make provision for the more confident facilitator to adapt the products for his/her specific situation.

The ABET ICT lesson material is not software neither computer based training. It is lesson material and includes worksheets, assessment and learning support material for each lesson.

ICT Education with Ease!

ICT SKILLS

The focus of the material is on ICT Skills. Learners will master computer skills and will be proficient in using the computer.

DIGITAL DIVIDE

We want to enable all learners in South Africa to cross the digital divide and we want to make ICT training available and applicable to all situations. This includes illiterate ground level workers and educated ABET Level 4 learners.

COMPLETE SYSTEM

Product includes all lesson material for each lesson. Classroom material, like worksheets, assessment, visual learning support and trainer's notes are included.
